

The introduction of BPL does not seem well thought out. Any communication medium that has a severe negative impact on another should be sent back to the laboratory. Amateur radio operators are required to use the least power needed to accomplish the desired communication. As the ambient noise level increases due to BPL, we will have to increase power proportionately. This might even have a negative impact on BPL, as it may be sensitive to high rf powers in the immediate vicinity. Please do not authorize BPL until more definitive testing is accomplished. Thank you.
